Marine serum

1. COMPOSITION

Marine serum is a concentrate of all the trace elements contained in seawater. It contains the more interesting minerals elements contained in seawater because of the sodium chloride has been removed. The ideal balance of minerals explain the cosmetic properties. This marine serum is especially designed for balneotherapy, thalassotherapy and spa treatments. This serum can be added to any treatments for a boost in the activity of the mask or wrap.

The water is slowly evaporated by a heating process. This process results in the concentration of minerals salts contained in seawater. A large part of sodium chloride is eliminated because it crystallizes first.

- **Preservatives**: none
- **Concentration in plant**: 100% from seawater

**Manufacturing site**: France

2. ACTIVE COMPOUNDS

Minerals & trace elements

3. MARKETING IMPACT

Blood plasma and seawater have almost the same composition. The mineral composition and the high concentration on trace elements are particularly favorable for our skin.

4. COSMETIC PROPERTIES

- Remineralizing
- Skin & hair revitalizing

5. FORMULATION

**Use level**: 1 to 10%

**Incorporation**: Marine serum should be added in water phase of your preparation at a temperature from 20 to 50°C.
